

NATIONAL/SANCTIONED AND CLUB EVENT MANUAL

This manual consists of an overview, event organiser, check lists and budget forms to be used as a guide when hosting Offroad Racing Events. Your North/South Island vice presidents are only a phone call away, don't hesitate to call them if you are uncertain or have any questions. If you have any information or ideas of use that could be added to this manual contact your local ORANZ Delegate.

THIS IS A LIVE DOCUMENT SO IF YOU HAVE ANYTHING TO ADD PLEASE ADVISE THE SECRETARY

OVERVIEW

VENUE :

- Always try to source a venue as close as practicable to the nearest township/city.
- Make sure there is easy access to the pits/spectator parking areas in all weather. Remember there will be some large trucks and trailer units entering the site.
- Ensure the pits/spectator parking areas are large enough to accommodate the vehicle numbers you anticipate - the more room the better.
- Avoid land that is highly fertile with a deep layer of topsoil or peat, are low lying (poor draining) or swamp land. Elevated land with a hard clay base is always best.
- Avoid steep rugged land. Both drivers and spectators want to see as many cars as possible finish the event.
- When evaluating a property it is important to consider spectator/driver safety and viewing points. A short course track in full view of the spectators that is wide with lots of passing room is ideal.
- Consider the weather. In case of heavy rain do you have an alternative venue or can you change the track, pits and or spectator parking areas to accommodate it. If dust could be a problem can you water the track? Think what if and plan for possibilities.

TRACK :

Short course :

- A short course track should be somewhere between 800 meters and 1.1 km. There should be a straight of around 200 meters long and enough technical areas to keep the racing close and exciting but at the same time wide enough to enable easy passing. A track at least 4 cars wide is a good start.
- Jumps are an important part of any short course track. Short sharp ramps to a jump are dangerous - ensure your jumps have a long gentle ramp and a safe landing area. If you're not sure, ask.
- Consider how the racing will flow i.e. pit entry and exit and the dummy grid area. It is important that cars can grid up in an area away from the racing and be ready to go straight to the start line without interfering with cars leaving the track.
- Spectator safety is paramount. Tape off areas where there is a high risk of cars leaving the track and keep spectators as far back as is practicable from the race track.

Long Course/Enduro :

- Consider all of the relevant points above when organising an Enduro
- A farm Enduro track should be no less than 4km. A track of 15-25km is ideal for a forest Enduro of up to 250km.
- There is a lot to consider when marking out an Enduro track. The number one thing to remember is that most drivers won't know where they are going so it will be easy to get lost or go the wrong way. Always get someone (that has no idea where they are going) to drive the track when you have finished marking it out. If they hesitate or find themselves looking for markers, it's not clear enough, so correct it.
- Tape off all possible wrong routes i.e. in a forest; tape off all roads that branch off the road you are racing on – no exceptions. Anywhere that it is possible for a car to overshoot a corner and take out marking tape, place a second tape far enough down the road that it won't be taken out as well. Make sure there is no chance of someone going the wrong way.
- Make sure all track markings are easily seen and give the driver ample time to respond at high speed: Check the rule book for track marking signs.
- Make sure in the tight and technical areas of an Enduro that there is plenty of room for the larger trucks to pass in one go. Three meters wide is the minimum at 90 degrees to the track not on an angle. Remember it's a race track not an obstacle course. Avoid single lane roads and tracks where possible
- Consider where safety crews can enter the track in the event of an accident and where the marshal points should be.
- Have plenty of copies of a full track map detailing all access roads, marshal points etc, on hand. Supply them to all marshals, fire crew, ambulance, recovery crews, police etc.
- Make sure there is radio contact between all marshal points.
- Safety is critical. Do you have enough marshals, recovery vehicles, lap scorers.

MARKETING :

- History shows that local print media, websites, Facebook and roadside signage are the cheapest and most effective forms of advertising. TV and radio are expensive and often don't get the desired result unless you have a huge budget.
- The ORANZ marketing manager is paid by ORANZ to do print media for all National events so make use of him. If yours is not a National event then give him a call, he is here to assist in any way he can and his fees are more than reasonable. He cannot promote an event he

knows nothing about so make sure you contact him well in advance (at least 8 weeks) to discuss a marketing plan. He will require as much information about the event as possible and it is important you stay in contact with him in the rundown to race day so he is constantly aware of updates, entries and issues of interest that he can make use of.

- Remember the better YOU promote YOUR event to competitors/spectators, the more you will get and the better it will be. Don't just expect people to turn up.
- Sponsors love numbers. Look after your sponsors, make them happy, don't just expect them to give you money, make sure you give back to them and always honour a sponsorship agreement.
- Have info available for all spectators i.e. an event program with a competitor list, sponsors, contacts, future events, ORANZ flyers etc.
- Have a PA system to inform everyone of what is happening, and keep pumping the sponsor's details.

PRIZE GIVING :

- Select a venue that reflects the importance of the event. Prize giving at the track maybe ok for a club day but for a national round a sports club, events venue, or hotel with a function room and food available is minimum.
- If the day after racing is a normal work day, ensure the prize giving is held as close as practicable to the track and as soon after racing as possible. This will ensure racers from out of town can attend and still have time to travel home.
- Avoid being liable for paying for food. If the venue requires specific numbers then get people to pay as an optional part of their entry.
- Make sure the venue has plenty of safe parking for those that will take their race trailers etc.
- Remember your sponsors, thank them, make a fuss, keep them happy and involved.

HOSTING A NATIONAL EVENT IS A PRIVILEGE. IT'S A GREAT OPPORTUNITY TO SHOW CASE OUR SPORT AND GENERATE FINANCES FOR YOUR CLUB SO MAKE THE MOST OF THE OPPORTUNITY YOU HAVE BEEN GIVEN.

EVENT ORGANISER :
